## INTRODUCTION:

RS2 Technologies, LLC ("RS2") manufactures designs and sells products (the "Products") for the access control industry. RS2 sells these Products in whole, separately or as part of a card access control system to RS2 dealers (the "Dealer").

## SHIPMENTS:

RS2 reserves the right to make partial shipments. All shipments shall be UPS Ground service unless otherwise specified on the Dealer's order.

## DEALER WARRANTY:

RS2 warrants to the original purchaser that RS2 Products, excluding items such as software and related documentation, will be free from defects in materials and/or workmanship for one (1) year from the date of delivery. Software is excluded; however defects in software media are covered for 90 days. Software dongles shall have a lifetime warranty against malfunction and defects. In the event a software dongle should need replacing, an advanced replacement will be issued upon receipt of a consignment purchase order from the dealer. The limited warranty covers normal use only. This warranty is not transferable.

The limited warranty covers normal use. RS2 does not warrant or cover:

- damage caused by failure to provide a suitable installations environment
- damage during shipping other than original shipment to purchaser
- damage caused by impact with other objects, dropping, falls, or spilled liquids
- damage caused by a disaster such as fire, flood, wind, earthquake, or lighting
- damage caused by unauthorized attachments, alterations, modifications or foreign objects
- damage caused by improper maintenance
- damage caused by any other abuse, misuse, mishandling, or misapplication
- products purchased from third party vendors

## SOFTWARE UPGRADES AND POLICIES:

RS2 has authored many software products and differentiates them by product name, edition and release version. The release version is split into two parts, major and minor. The major release version number (the "Major Version") is the first digit of a set of three values. When the first digit increases it is said to be a major revision of the software for example going from version 1.0.0 to 2.0.0 or 1.1.0 to 2.0.10. Major Versions usually contain new features and upgradeable options offering greater flexibility. The minor release version (the "Minor Version") number(s) are the second or third digits of a set of three values. When the second or third digits increase, it is said to be a minor revision of the software for example going from version 1.1.24 to 1.1.29 or 1.1.24 to 1.2.10. Minor Versions usually contain small software fixes and tweaks improving performance and reliability.

All RS2 software products carry a product life-cycle and are published on the RS2 website. Product life-cycles are a period of time for which support is available on a specific product's Major Version. RS2 considers a product's life-cycle to be terminated when it is older than the current Major Version plus one previous Major Versions.

RS2 software product support is based on the published life-cycles. Terminated Major Versions will not be supported and require the Dealer to upgrade to the current Major Version for any further assistance.

Existing systems may upgrade to the current Major Version regardless of what Major Version they are currently at. For pricing, reference the Access Control Version Upgrades section of the current RS2 Dealer Price Schedule as Major Version upgrades may only be purchased through a Dealer. Dealers who have installed software within 90 days of the RS2 billing date shall qualify for a free upgrade to the current Major Version. The Dealer must supply the software key (dongle) serial number before an upgrade is performed. All software keys (dongles) are tracked by a serial number which references the invoice number containing the RS2 billing date. All Minor Version upgrades shall be available free of charge for the product's lifecycle.

## VERSION UPGRADES (VU):

A VU is used to upgrade software products from an earlier version to the current release. A VU is only available for a currently supported version of the software. Refer to the Product Life-Cycle Chart to determine if a product is currently supported. If your customer has a non-supported version, contact your Regional Sales Manager.

*NOTE: A VU may not be used to go from an SL8 to an SL25 or an ESSL8 to an ESSL25. Both of these examples are software upgrades and not version upgrades. To upgrade your current software license please refer to the SU section of the price list.*

## SOFTWARE UPGRADES (SU):

A SU is used when upgrading a software license to a larger license. The SU is the credit amount that you get for the original software license towards the larger license. When ordering you must include the serial number of the original dongle.

*NOTE: In order to get the SU credit, the customer must be running the current version of the software. If the customer is not running the current version of the software, they must purchase a VU for the existing software.*

## DIRECT SUPPORT AGREEMENTS (DSA):

A DSA includes all version upgrades that occur as well as including the ability for the customer to contact RS2 Technical Support directly for software related issues with their Universal software. Please see the DSA on our web site to get a complete list of covered support issues and a list of exclusions. The DSA is a contract between RS2, the supporting dealer and the customer.

*NOTE: A DSA is for business hours support only, which is Monday through Friday, 8:00 AM to 5:00 PM Central Time and does not include holidays.*
